(1) whether the electronic data is reliable and independent, taking into account the following factors:

    (a) the accuracy of the data;

    (b) how secure the data is;

    (c) how the data is kept up-to-date;

    (d) how comprehensive the data is (for example, by reference to the range of persons included in the data and the period over which the data has been collected);
